

Block 3 pre-specified transferability protocol

the manifest (testcases, regimes, hypotheses, threshold) is committed before any non-bestest_{air} run

two component verdicts: controller-side $m_s^{\text{RL}} \leq \tau_k$ (per testcase) and surrogate-side full Stage A/B/C RMSE gain.

The analysis-plan manifest is bit-identical between the open (1861e48) and close (b915bfc) commits; only result appendices are appended.
